

ALGORITHMIC TRADER COURSE

Part 1: Strategy Building and Signal Transmission – Fundamentals of Quantitative

Trading

➤ Are You Trading... or Making Emotional Decisions?

Most traders lose not due to lack of knowledge, but because of recurring factors such as hesitation, fear, greed, absence of clear rules, inability to stick to a single plan, and relying on intuition rather than numbers. This section is designed to put you on the right path toward systematic and automated trading, where rules replace emotion and numbers replace gut feelings.

➤ Concept of Part 1 (Strategy Building and Signal Transmission)

This section forms the true foundation of automated trading. You will move from: "I feel the market will rise" to "The system confirmed the signal according to testable numerical conditions." You will learn how to transform a noisy chart into clear, testable numerical rules that can be analyzed and relied upon consistently.

➤ What You Will Learn in This Section:

- 1 Understanding automated trading and the quantitative approach.
- 2 Professional use of TradingView.
- 3 Programming with Pine Script.
- 4 Understanding indicators from a systematic numerical perspective.
- 5 Building real, testable, and executable trading strategies.
- 6 Strategy testing (Backtesting).
- 7 Sending signals and alerts in an organized and precise manner.

➤ Quick Information:

- ⌚ Duration: 15 training hours
- 🎓 Level: Beginner to Intermediate Professional
- 🚫 No prior programming experience required
